The cover of 'The Horizon Report 2006 Edition' features a sepia-toned photograph of a lone tree standing in a body of water under a cloudy sky. The title 'THE HORIZON REPORT' is printed in a bold, sans-serif font across the upper portion of the image.

THE HORIZON REPORT

2006 EDITION

a collaboration between
The NEW MEDIA CONSORTIUM
and the
EDUCAUSE Learning Initiative
An EDUCAUSE Program

The annual *Horizon Report* describes the continuing work of the NMC's Horizon Project, a research-oriented effort that seeks to identify and describe emerging technologies likely to have a large impact on teaching, learning, or creative expression within higher education. The third edition in this annual series, the *2006 Horizon Report* is a collaboration between the New Media Consortium and the EDUCAUSE Learning Initiative, an EDUCAUSE program.

Horizon Report – Key Trends

- **Dynamic knowledge creation** and social computing tools and processes are **becoming more widespread and accepted**
- **Mobile and personal technology** is increasingly being viewed as a delivery platform for services of all kinds
- Consumers are increasingly expecting individualized services, tools, and experiences, and **open access to media, knowledge, information and learning**
- **Collaboration** is increasingly seen as **critical across the range of educational activities**, including intra- and inter-institutional activities of any size or scope.

Horizon Report

Critical Challenges

- The typical approach of experimentally deploying new technologies on campuses does not include processes to quickly scale them up to broad usage when they work, and often creates its own obstacles to full deployment.
- The phenomenon of technical “churn” is bring new kinds of support challenges.

Horizon Report

Critical Challenges

- Peer review and other academic processes, such as promotion and tenure reviews, increasingly do not reflect the ways scholarship actually is conducted.
- Information literacy should not be considered a given, even among “net-gen” students.
- Intellectual property concerns and the management of digital rights and assets continue to loom as largely unaddressed issues.

CORNELL

HISTORY CELEBRATES the battlefields whereon we meet our death, but scorns to speak of the plowed fields whereby we thrive. It knows the names of the king's bastards but cannot tell us the origin of wheat. This is the way of human folly." -- Jean-Henri Fabre

The Core Historical Literature of Agriculture (CHLA) is a core electronic collection of agricultural texts published between the early nineteenth century and the middle to late twentieth century. Full-text materials cover agricultural economics, agricultural engineering, animal science, crops and their protection, food science, forestry, human nutrition, rural sociology, and soil science. Scholars have selected the titles in this collection for their historical importance. Their evaluations and 4,500 core titles are detailed in the seven volume series *The Literature of the Agricultural Sciences*, Wallace C. Olsen, series editor.

Current online holdings: Pages: 850,264 Books: 1,849 (1,910 Volumes) Journals: 6 (288 Volumes)

For a related collection of core texts in the disciplines of home economics, see **Home Economics Archive: Research, Tradition and History (HEARTH)** at <http://hearth.library.cornell.edu/>

Digital Du Bois

As stewards of the Papers of W.E.B. Du Bois, the Department of Special Collections and University Archives has a unique obligation to promote engagement with the ideas and legacy of one of America's foremost intellectuals and advocates for social justice. In the coming months, we plan to make selections of Dr. Du Bois' writings publicly available in electronic format through this page, adding enhanced information about our collections of manuscripts and photographs, along with exhibits drawn from SCUA holdings.

Several of Du Bois' published works have already passed into the public domain and have been made available to the public in digital form.

PROCON – Ensuring future publications are in digital form.

Research libraries are committed to moving to an environment in the medium term future (e.g., by the end of the decade), in which most newly published materials are acquired in digital form. Research libraries will work with scholars, publishers, and each other in order to achieve this. Research libraries agree to shift to e-only by 2008 for those publications that are available in both print and electronic form including: journals, reference books, textbooks, government documents and other areas like electronic books as the electronic publishing models develop. A complete transition to digital form by 2008 is dependent on the existence of trusted archives for digital content.

JANUS CONFERENCE

Archiving

Ensure the coordinated, long-term
maintenance of traditional and digital
holdings.

JANUS CONFERENCE

October 9-11, 2005

Cornell University
Library

Archiving

With the exception of clearly defined special collections materials, all **print materials published between 1830 and 1960 should be transferred to a regional print repository** (constructed, if necessary, for that purpose). Each regional repository should sell or discard any duplicates it receives that are available in other repositories (so that it retains only one copy).

Archiving

At the same time, all digital objects selected by all research libraries should be added to an OAIS-based repository that can meet the certification requirements as defined by RLG/NARA.

Urgent Action Needed to Preserve Scholarly Electronic Journals

Digital preservation represents one of the grand challenges facing higher education. In field after field, research and teaching are generating data, reports, publications, teaching materials, and other forms of scholarly communication in digital formats. Research and teaching are also increasingly dependent on data mining tools and other computer-based techniques that require the long-term persistence of these various forms of digital information to advance knowledge. Yet as the creation and use of digital information accelerate, responsibility for preservation is diffuse, and the responsible parties—scholars, university and college administrators, research and academic libraries, and publishers—have been slow to identify and invest in the necessary infrastructure to ensure that the published scholarly record represented in electronic formats remains intact over the long-term. Inaction puts the digital portion of the scholarly record—and the ability to use it in conjunction with other information that is necessary to advance knowledge—increasingly at risk, and solutions may require unique arrangements within the academy for sharing preservation responsibility.

An Open Letter to All University Presidents and Provosts Concerning Increasingly Expensive Journals

by Theodore Bergstrom and R. Preston McAfee

For nearly a century, a symbiotic relationship existed between scholars and scholarly publishers. Academics freely provided their discoveries, work, and time editing and reviewing, and scholarly publishers provided packaging and sold the output of the academics' labors for a modest profit. This benefited both groups, because the publishers received the most valuable inputs for free, while the academics were sheltered from the market.

Journal Cost-Effectiveness
Use this search engine to find internationally-published journals and rank them by price per article or citation.
reasons for their increase in cost.

Title:	<input type="text" value="journal of Pacific history"/>	Search tips: ? for one unknown character * for zero or more unknown characters quotes for "exact phrase" ^ = Not blank field = all
Publisher:	<input type="text"/>	
ISSN:	<input type="text"/>	
<input type="button" value="Search"/>		

It is time to recognize a simple fact, and react to it. The symbiotic relationship between academics and for-profit publishers has broken down. The large for-profit publishers are gouging the academic community for as much as the market will bear. Moreover, they will not stop pricing journals at the monopoly level, because shareholders demand it.

JANUS CONFERENCE

October 9-11, 2005

Cornell University
Library

The Internet is, without a doubt, the single most important reason for Janus to look forward. Through its disruptive success, **the Internet has redefined the nature of collections, the relationship of private and public goods, and the role of the library in its communities.**

Among the Internet-influenced changes we now contend with are the malleability and perishability of digital information, and a change in the locus of collections from one of local use by well-known constituents, to one in which users can be neither described nor anticipated.
