COST Action FA1304 FITFISH

Current information needs for effective fish passage management: prioritization and recent developments

Leo Nagelkerke

Jóhannes Sturlaugsson

Rationale of WG 2

- The strong **human influence** on many water bodies in Europe has had **detrimental effects** on populations of **migratory fish** species.
- **Measures to restore** migration have, until now, a strong **case-study** character.
- Need for a profound, **integrative scientific approach**, leading to a framework for analysing migration and the design of effective measures.
- Existing **knowledge** is often **scattered**, or **poorly accessible**, because it is not published as scientific peer-reviewed papers.

Aim of WG 2

Exchange and **integrate** knowledge among scientists and experts involved in the field and to **develop a research agenda** aimed at generating **new knowledge** in the fields of:

1. **monitoring fish behaviour** in real-life situations, using a range of well-known and high-tech techniques;
2. **experimental** approaches in which the effect of disturbing cues on **behaviour and physiology** of individual fishes is investigated;
3. **modelling** the effects of **mitigating measures** on population dynamics.

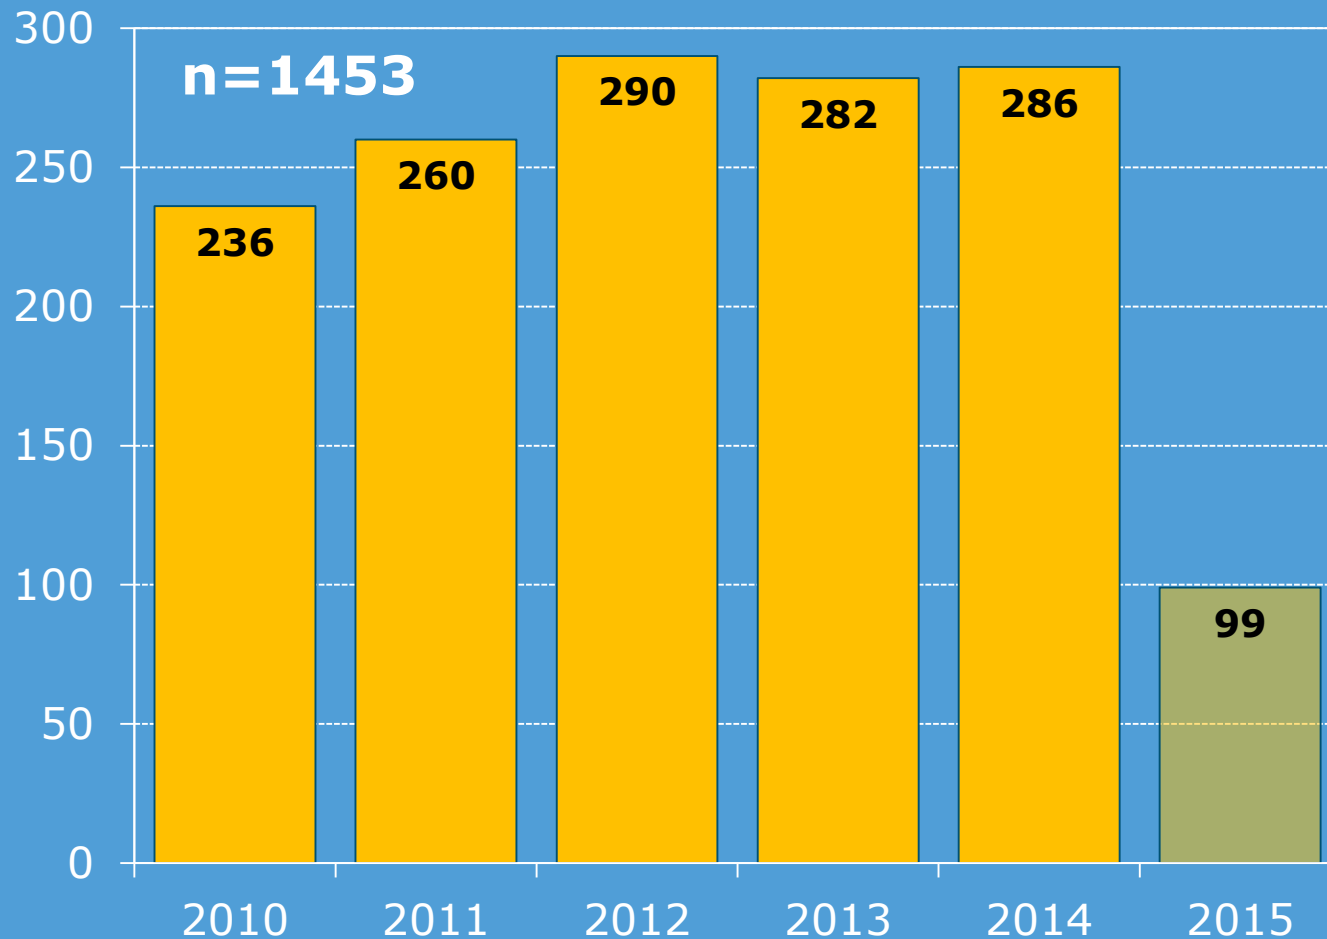

Countries involved

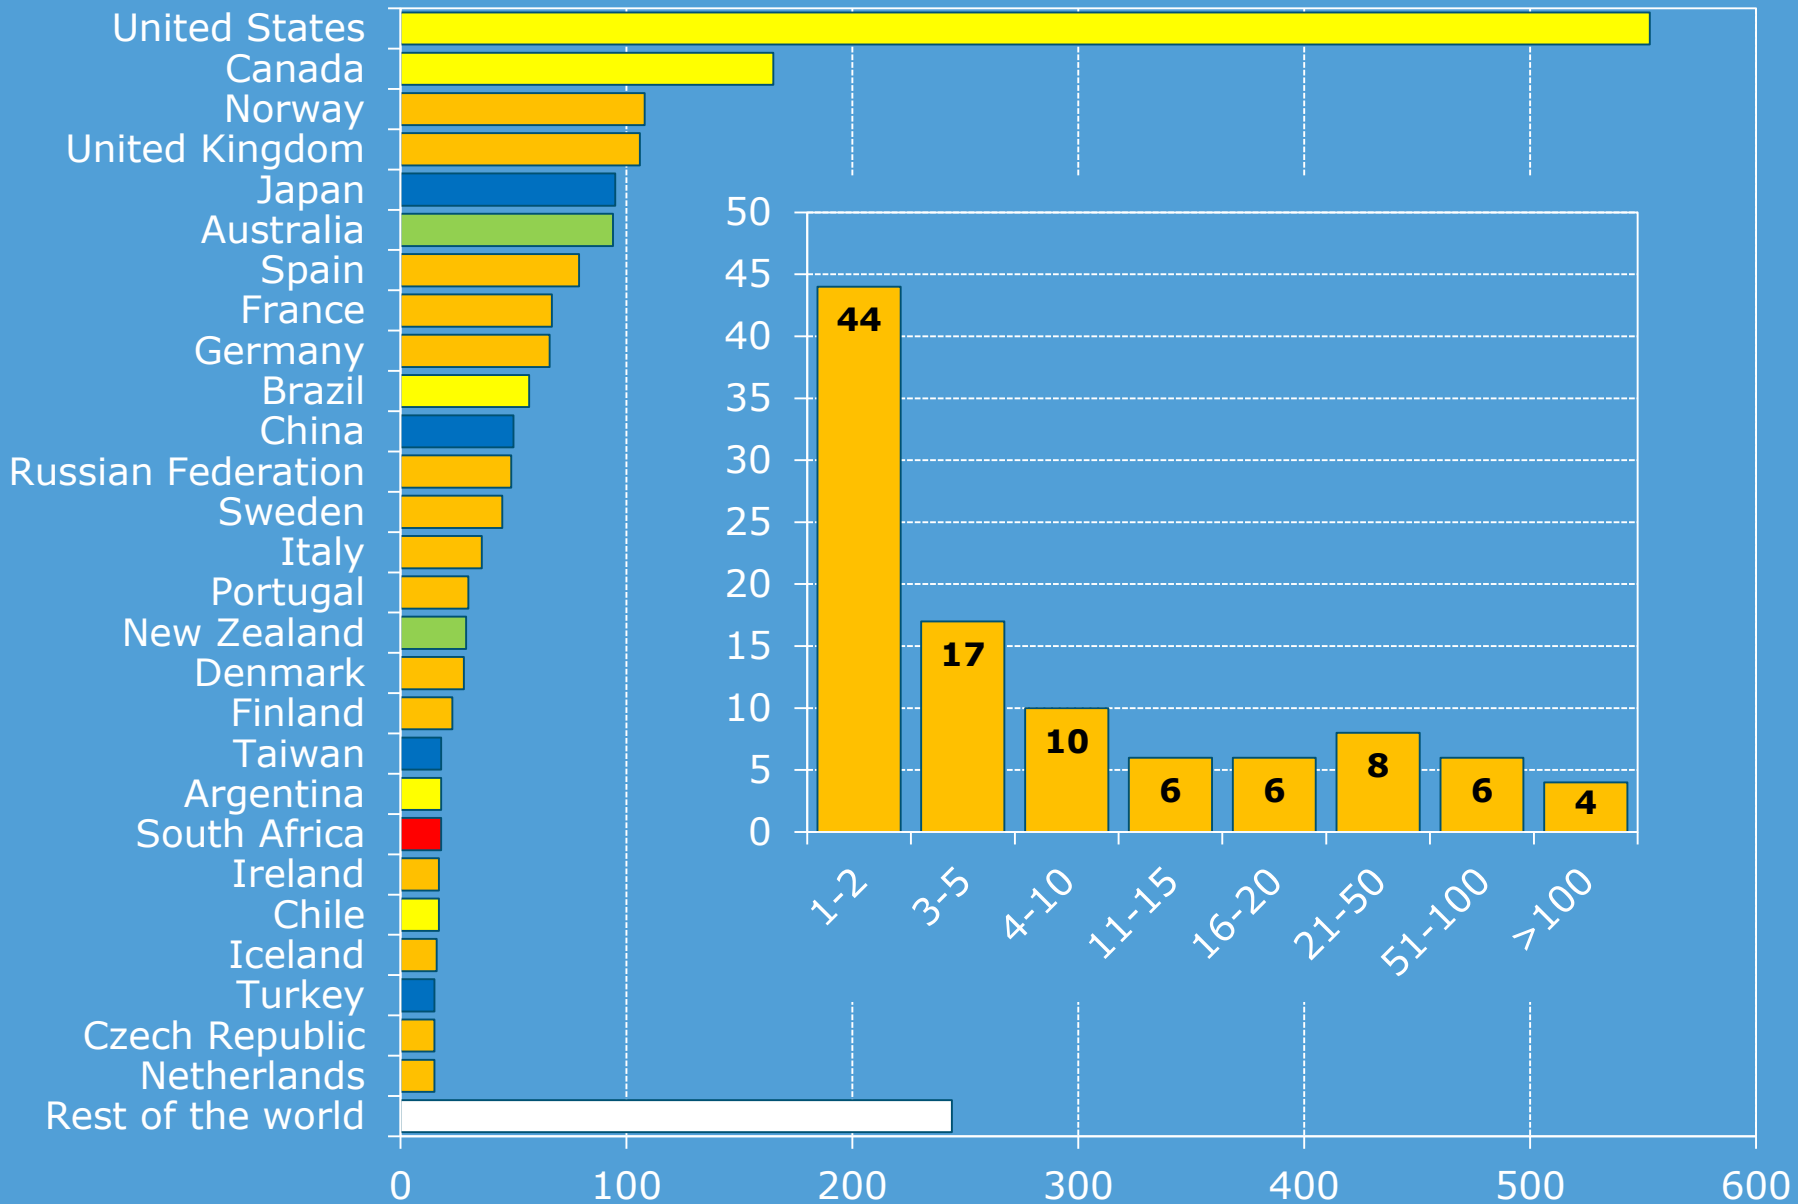

21 countries
(24 June 2015)

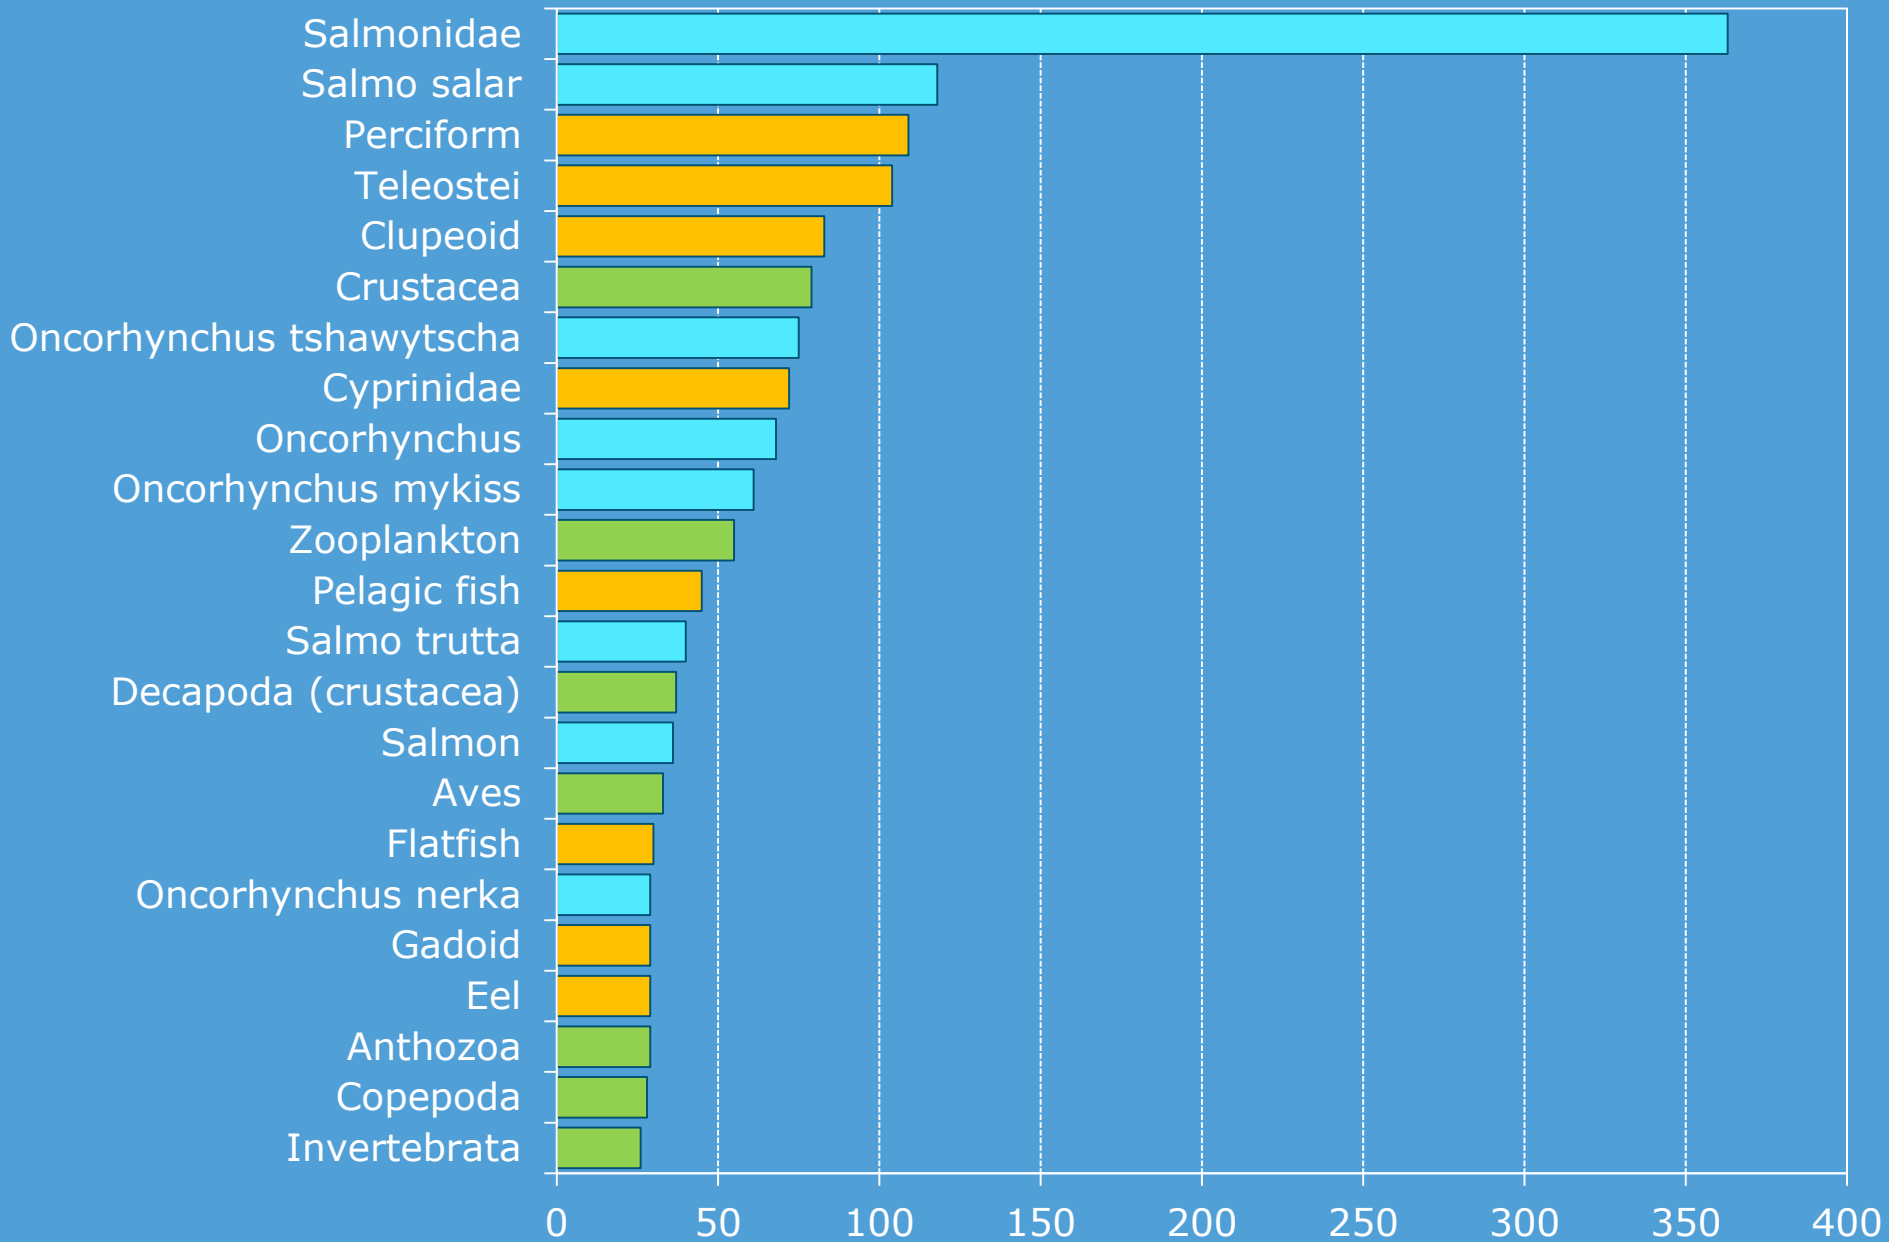

Number of publications 2010-2015: "Fish migration" Scopus

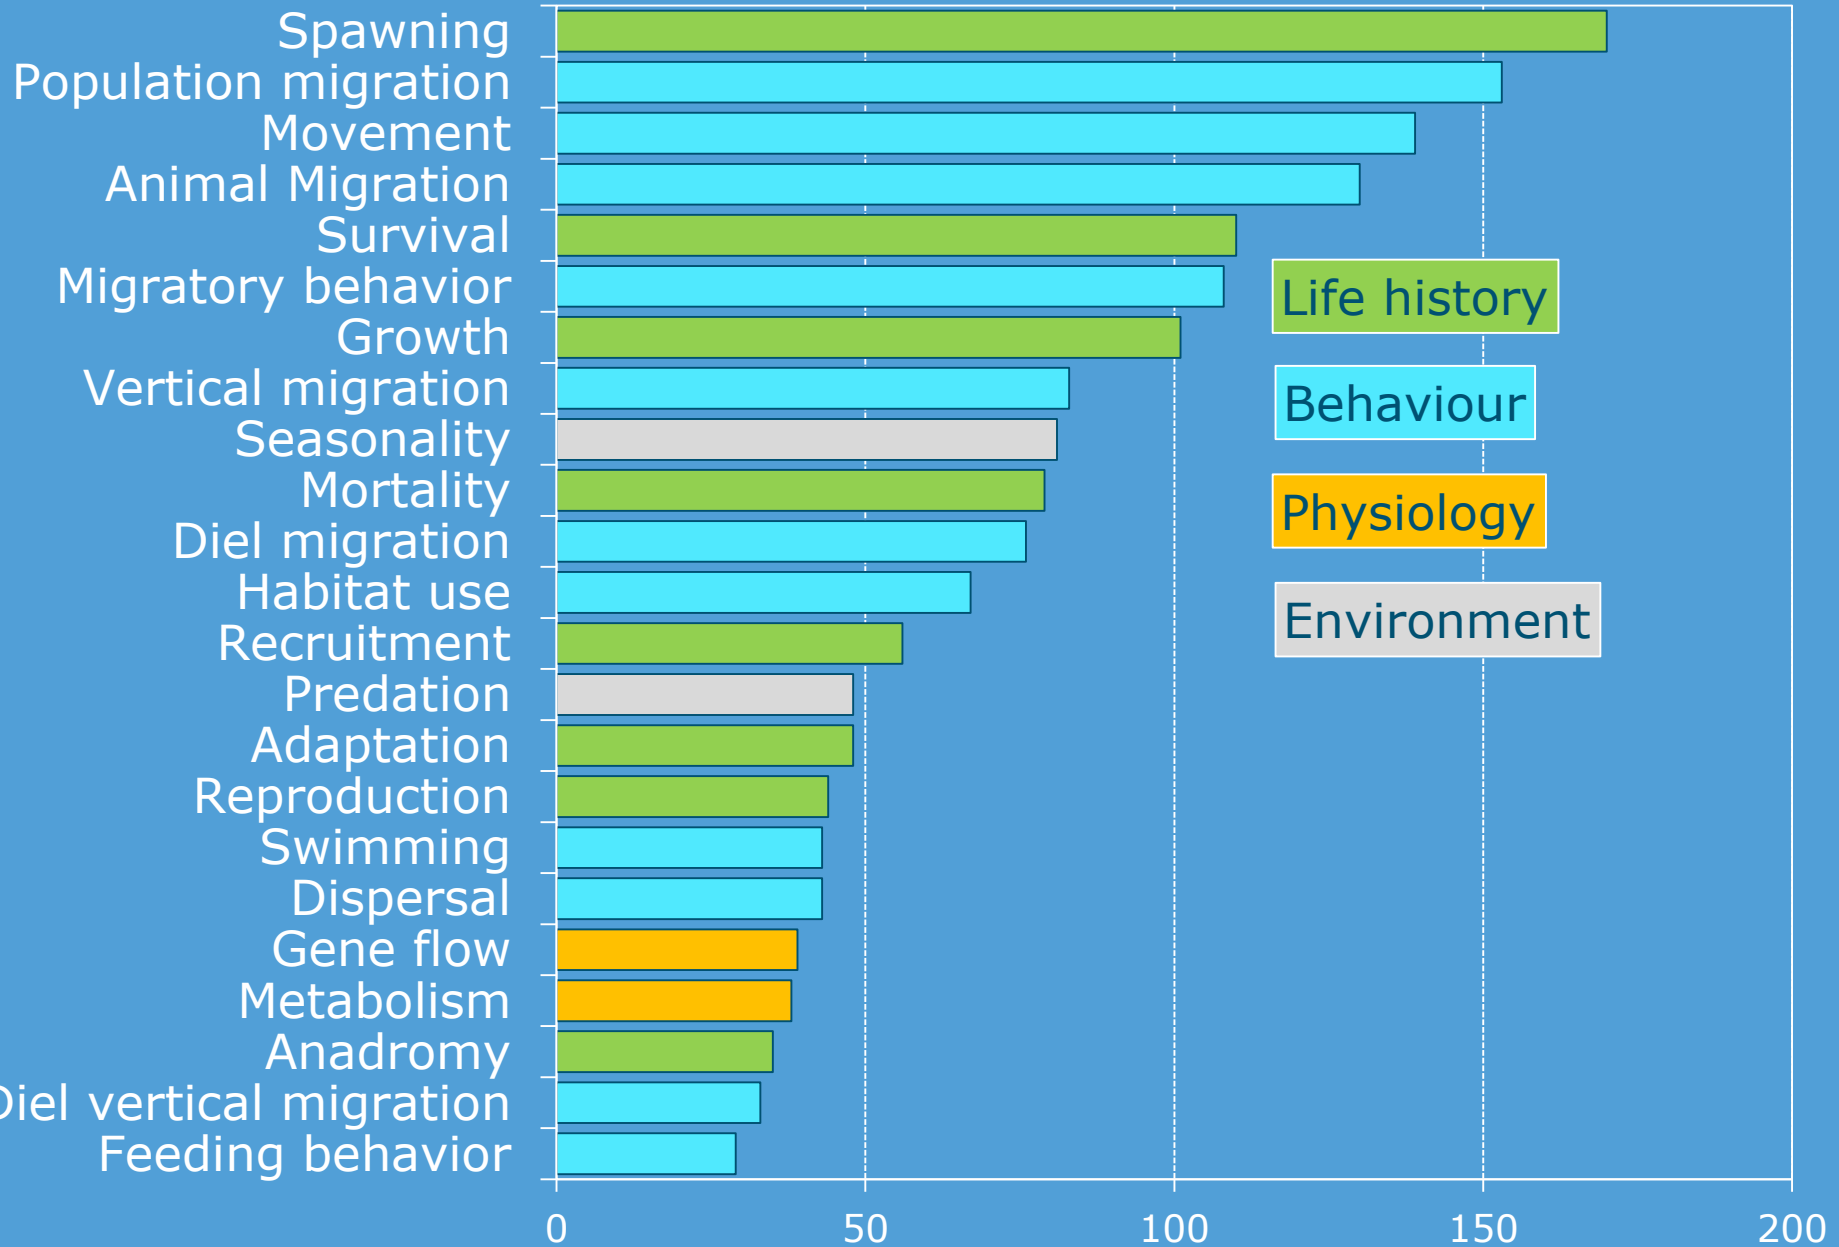

Countries

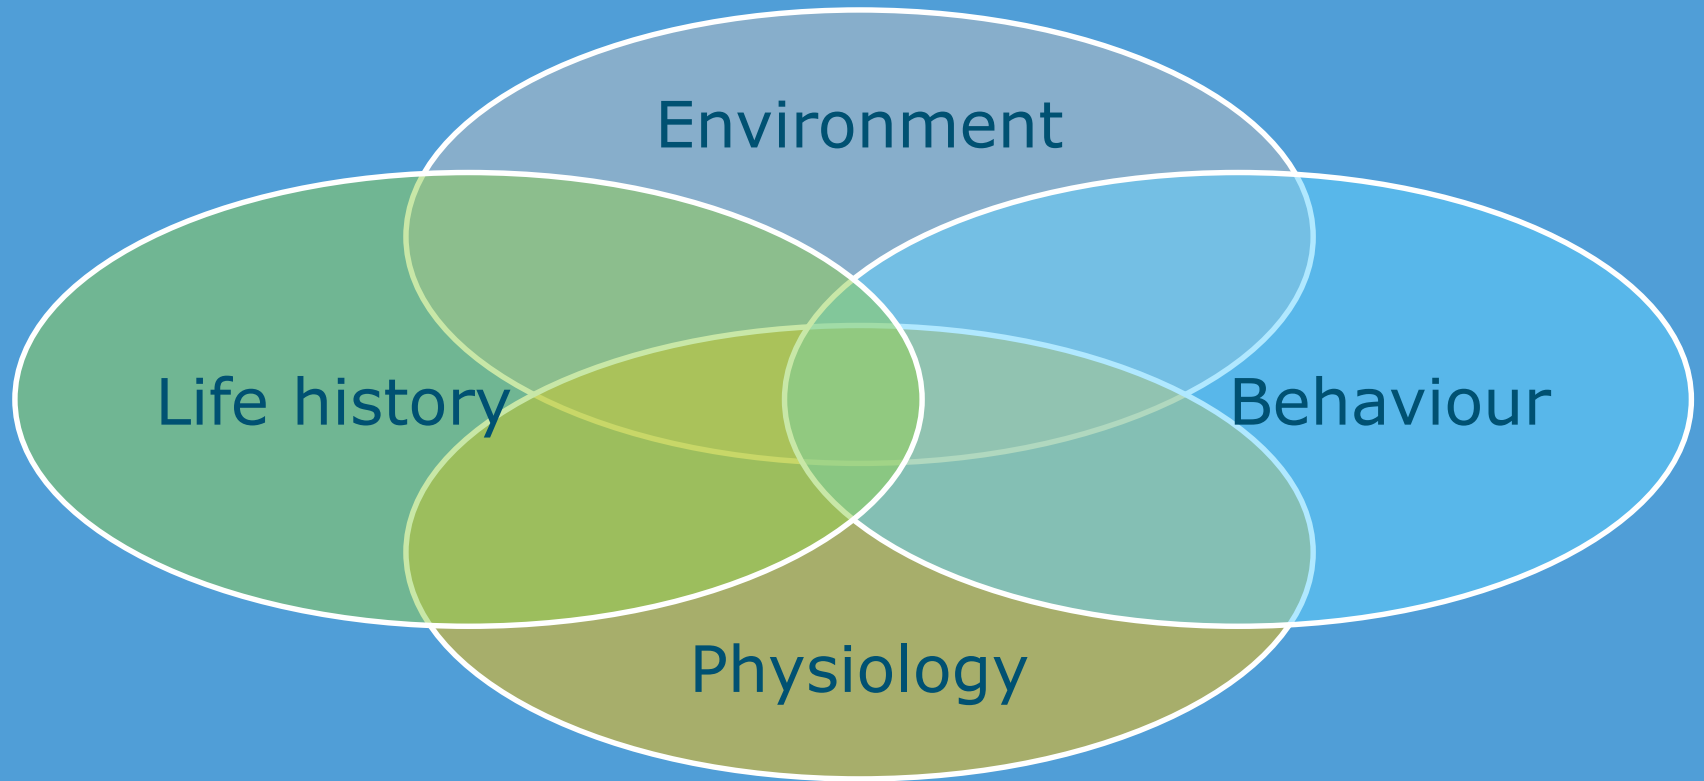

Taxa

Processes

Individual variation in migratory behaviour

Connectivity vs. invasions: round goby

Some questions (a very biased selection)

- How large are **migration differences** between conspecific individuals, and what causes them?
- How do barriers and mitigation measures affect individuals with **different migratory traits**?
- Do barriers and mitigation measures lead to **human-induced selection** and does this lead to population-genetic changes?
- How do we deal with the **connectivity-invasion** controversy?
- How can the effectiveness of migration mitigation measures be tuned to **functional traits** of fish species?

FITFISH Workshop: 13:30-17:30

- Evaluation of existing fish migration data, monitoring methodology for tracking migrant fish and bypass design, and the use of expertise within the platform to identify potential improvements
- The use of the established research network to search for collaborative project opportunities
- Transfer of knowledge between scientists, industry and policy makers

Venue: Oude Boteringstraat 18: assemble at the registration desk at 13:00
